JAVA BACKEND DEVELOPER

Java Backend Developer with hands-on internship experience building RESTful APIs and Spring Boot services for a banking-grade messaging platform (ICICI iMSG). Proficient in Core Java, Spring Boot, SQL, and MongoDB, with a strong DSA foundation (150+ LeetCode problems solved). Seeking a Java Backend Developer internship to contribute to scalable, production-ready systems.

TECHNICAL SKILLS

Programming Languages : Java, C++, C, Python, JavaScript

Web Technologies : HTML, CSS, Bootstrap

Frameworks : Spring Boot

Databases : MongoDB, SQL

Dev Tools : Visual Studio Code, Git, GitHub

EDUCATION

Pimpri Chinchwad College of Engineering and Research (PCCOE&R), Pune

Expected Graduation: 2027

Bachelor of Engineering (B.E.) in Information Technology — Currently in Third Year

CGPA: 7.85

EXPERIENCE

Software Development Intern — The Data Tech Labs

February 2026 – August 2026

- Working as a Java Backend Developer on the ICICI iMSG project, a messaging and communication platform.
- Developing and maintaining RESTful backend services using Java and Spring Boot to support messaging workflows.
- Collaborating with cross-functional teams to design scalable backend modules aligned with banking-grade requirements.
- Participating in code reviews, debugging, and performance optimization of backend components.
- Using Git and GitHub for version control, branch management, and team collaboration.

Technical Training / Practical Development Experience

October 2025 – Present

- Built a Spring Boot library management app with CRUD operations for books, users, and transactions using SQL/NoSQL storage.
- Designed and exposed RESTful APIs for book and user management; followed layered architecture (controller, service, repository).
- Managed codebase with Git & GitHub for version control, collaboration, and project tracking.

PROJECTS

Smart Parking Slot Booking System

[Source Code](#)

- Built a backend system to manage real-time parking slot availability, booking, and release using Spring Boot and REST APIs.
- Designed entities for slots, users, and reservations with MySQL; implemented time-based slot locking to prevent double booking.
- Exposed RESTful endpoints for slot search, booking, cancellation, and admin slot management with proper HTTP status handling.
- Followed layered architecture (controller, service, repository) ensuring clean separation of concerns and scalability.
- Used Git & GitHub for version control; structured codebase for potential integration with a mobile or web front-end.
